Bartle - Introduction To Real Analysis - Chapter 6 Solutions

Bartle - Introduction To Real Analysis - Chapter 6
 Solutions Section 6.2 Problem 6.2-4. Let $A \subseteq \mathbb{R}$; $a, b \in \mathbb{R}$;
 $n \in \mathbb{N}$ be real numbers and let f be defined on \mathbb{R} by $f(x) = \sum_{k=0}^n (a + kx)^2$ for $x \in \mathbb{R}$. Find the unique point of
 relative minimum for f . Solution: The first derivative
 of f is: $f'(x) = 2 \sum_{k=1}^n (a + kx)$: Equating f' to zero, we
 find the relative extrema on \mathbb{R} as follows: $f'(c) = 2 \sum_{k=1}^n (a + kc) = 2 \left(\sum_{k=1}^n a + c \sum_{k=1}^n k \right) = 2 \left(na + c \frac{n(n+1)}{2} \right) = 0$... Jun 2th, 2024

Bartle - Introduction To Real Analysis - Chapter 8 Solutions

Bartle - Introduction To Real Analysis - Chapter 8
 Solutions Section 8.1 Problem 8.1-2. Show that
 $\lim_{n \rightarrow \infty} \left(\frac{1 + n^2 x^2}{n} \right) = 0$ for all $x \in \mathbb{R}$. Solution: For $x = 0$,
 we have $\lim_{n \rightarrow \infty} \left(\frac{1 + n^2 x^2}{n} \right) = \lim_{n \rightarrow \infty} \left(\frac{1}{n} \right) = 0$, so $f(0) = 0$. For $x \in \mathbb{R} \setminus \{0\}$, observe that 0
