Mathematical Logic And Set Theory (For Any Set X,

There is a set to which all members of members of X belong.) The axioms of pairing, union, and comprehension give us some operations on sets. For any X and Y , $\{x, y\}$ is the set whose members are exactly X and Y . (It exists by pairing and comprehension.) Let $\{x \mid \phi(x, \dots)\}$ be the set of all x such that $\phi(x, \dots)$.

Set Theory and Logic (fragments of) Set Theory, and in theory, they could be deduced using the Tait calculus I introduced in the last chapter. The main tool from that chapter that will be put to use later is the recursion theorem. I develop basic set theoretic concepts up to ordinals, trees, and cardinals.
